

DATCOIN

DAATO

SHORT WHITEPAPER

Full Abundance Functionality for All Users in All Nations

DATCOIN (DAATO) is the declared-law coin of the Infinity Double Function Protocol: a fixed supply of 153,370,371 on Base, open-source verified, no admin mint, no hidden keys. 1 DAATO = 10^{18} DAATATO — as the satoshi is to Bitcoin. Built for lawful abundance and a thousand-year standard.

1. The Coin Today

THE ONLY DAATO DATCOIN

- Network: Base (an Ethereum layer-2; final settlement on Ethereum).
- Canonical contract — the ONLY DATCOIN-DAATO:
0xb902e3F092fdF2d8308E4A9e9C7c1a4d4280A8B0
- Total supply: 153,370,371 DAATO, minted whole at deployment. No mint function is callable by any administrator; no upgrade mechanism exists; no key can pause, tax, or blacklist.
- Base unit: the DAATATO. One DAATO divides into 10^{18} DAATATO, as one Bitcoin divides into satoshi — abundance divisible to the smallest hand.
- Source code: published and verified on BaseScan, importing only the OpenZeppelin ERC-20 library — the most audited token code in existence, foundation of the leading stablecoins.

2. Declared Law, Not Managed Money

Every collapsed currency was killed by a hand that could touch it. DATCOIN removes the hand: its constitution is arithmetic, published in full, identical on every machine in every nation, in every century. The constants of the protocol stand by name in the verified source — they are the fingerprint of the true coin, and any token lacking them confesses itself counterfeit by inspection. What is knowable by all cannot be stolen by few; predictability is the mother of peace.

3. Verify Everything, Trust Nothing

- Open the canonical contract on BaseScan and confirm the green “Verified” check.
- Read the contract: name DATCOIN · symbol DAATO · decimals 18 · totalSupply 153,370,371 $\times 10^{18}$.
- Confirm the address you hold matches the canonical address above, character for character. Many tokens wear the name “Datcoin”; there is ONE DATCOIN-DAATO, and it lives at the canonical address alone.
- There is NO presale, NO airdrop, and NO second address. Any offer of DATCOIN before or beside the owner’s canonical channel is a counterfeit. The owner will never ask for your keys, your seed phrase, or a payment to “verify” anything.

4. The Road Ahead — Stated Honestly

The verified source carries reserved constants and a one-way latch, set exactly once and only by the owner of record, by which a future supply engine — the heart of the Infinity Double Function Protocol — may one day be joined to this same address after independent audit. Until that latch is set, DATCOIN is precisely what this page describes: a fixed-supply instrument, nothing more and nothing less. No schedule is promised before its engine is

real, no date is announced before its audit is closed, and every future step will be declared once, in writing, through the owner's canonical channel. Truth in every season is the first law of this house.

5. The Works of the House

Beyond the coin, this house is building DATAGEAR — a line of protective data-security products conceived for the safety of humanity — and intends to pursue working relationships with leading security organizations worldwide. In the spirit of this paper's first law, such works are announced as realities, never as promises: each product, partnership, and capability will be declared once, through the canonical channel, when it is real and verifiable. The coin serves the works; the works serve the nations.

6. Full Abundance for All Nations

DATCOIN is built to carry commerce, not speculation: to price books, freight, labor, and real goods across the nations, through a publishing and distribution network already reaching 156 countries. A phone and the published arithmetic are the only requirements — the poorest nation audits this coin as fully as the richest, and the widow's portion tomorrow is written where she can read it tonight. The instrument is scaffolding; the cathedral is provision and peace.

7. Notice

This paper describes software; it is not an offer, a solicitation, or investment, legal, or tax advice. Digital assets carry risk, including total loss. No promise of price, profit, or return is made by any person in any channel. Obtain your own professional counsel before acting.

The net held one hundred fifty and three, and the net was not broken.
